REC_DS using C_Week 7_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

Input Format

The first line contains two integers, n and table_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

Output Format

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5 10
21 31 41 51 61
3
31 60 51
Output: Value 31: Found
Value 60: Not Found
Value 51: Found
Answer
#include <stdio.h>
#define MAX 100
void initializeTable(int table[], int size) {
  for (int i = 0; i < size; i++) {
    table[i] = -1;
  }
}
// Inserts roll numbers into the hash table using linear probing
void insertIntoHashTable(int table[], int size, int arr[], int n) {
  for (int i = 0; i < n; i++) {
    int roll = arr[i];
    int index = roll % size;
```

```
// Linear probing to find next empty slot
    while (table[index] !=-1) {
       index = (index + 1) % size;
    table[index] = roll;
  }
}
// Searches for a roll number in the hash table using linear probing
int searchInHashTable(int table[], int size, int key) {
  int index = key % size;
  int start = index;
  // Search until an empty slot or full circle
  while (table[index] != -1) {
    if (table[index] == key) {
       return 1; // Found
    index = (index + 1) \% size;
    if (index == start) break; // Full loop, stop
  return 0; // Not found
int main() {
int n, table_size;
  scanf("%d %d", &n, &table_size);
  int arr[MAX], table[MAX];
  for (int i = 0; i < n; i++)
    scanf("%d", &arr[i]);
  initializeTable(table, table_size);
  insertIntoHashTable(table, table_size, arr, n);
  int q, x;
  scanf("%d", &q);
  for (int i = 0; i < q; i++) {
    scanf("%d", &x);
    if (searchInHashTable(table, table_size, x))
```

```
printf("Value %d: Found\n", x);
else
printf("Value %-'
                                                        240101389
            printf("Value %d: Not Found\n", x);
       return 0;
     }
     Status: Correct
                                                                             Marks: 10/10
                                                        240701389
```
